About me

Recent B.Sc. in Information Technology graduate with a strong foundation in Full-Stack Development, RAG pipelines, and AI agent orchestration. Completed projects in production-ready web applications, vector database integration, and LLM workflow automation. Eager to leverage analytical abilities to develop robust AI features and achieve high-quality, reliable system output in a dynamic AI-driven production environment.

Technical Skills

Frontend:

HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Astro, SvelteKit, Vue.js

Backend:

Python, FastAPI, Django, Django REST Framework, Node.js, Hono, REST API

Database:

PostgreSQL, Supabase, MySQL, SQLite, Convex, Vector Databases

DevOps / Tools:

Git, GitHub, Linux, AWS, Vercel, Netlify, Nginx, CI/CD, Docker, K8s

AI / LLM:

LLMs, RAG, LangChain, LangGraph, OpenAI API, Evaluation Frameworks, Prompt Engineering, AI Agents

Languages

Thai : Native English : TOEIC 780

Projects

Nextmart - Full Stack Developer

March 2025 - April 2025

Tech Stack: Next.js, Django REST Framework, PostgreSQL, Tailwind CSS, Zustand

- Developed a full-stack e-commerce platform with product catalog, category filtering, shopping cart, checkout flow, order history, and admin management. Built REST APIs using Django REST Framework and PostgreSQL for product, cart, authentication, order, and admin workflows. Implemented JWT authentication with access/refresh token handling for protected routes and secure user sessions. Modeled relational database schemas for products, users, carts, orders, order items, and admin-managed inventory data. Designed a responsive Next.js frontend with cart state management, product browsing, checkout handling, and backend-synced order processing.

SeeU Bangkok - AI Engineer

July 2025 - Jan 2026

Tech Stack: Next.js, React, Typescript, Hono, Supabase, Langgraph, MapBox

- Built an AI-powered Bangkok travel planning platform with interactive map exploration, AI chat, and editable itineraries. Designed LangGraph-based AI workflows for multi-step planning and implemented a RAG pipeline using Supabase pgvector to enhance recommendation relevance. Containerized the entire application, including the Hono backend and AI services, using Docker to ensure environment parity and streamlined deployment.

Jisa - AI Engineer

April 2026 - Present

Tech Stack: FastAPI, Next.js, PyTorch, OpenCV, Ollama

- Built an end-to-end AI manga translation system. Developed a FastAPI backend to orchestrate complex workflows including speech bubble detection, OCR, and translation. Implemented a human-in-the-loop validation workflow as a key debugging and performance monitoring mechanism to ensure high-quality output before final rendering. Optimized the translation pipeline by streamlining OCR extraction and text cleanup, resulting in a more efficient and reliable AI workflow.

Education

King Mongkut's Institute of
Technology Ladkrabang (KMITL)
B.Sc. in Information Technology, 2026
